DETAILED ACTION

This Office action is in response to applicant's RCE filed on 22 May 2006.

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's amendment filed on 22 May 2006 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 33 is rejected under 35 U.S.C. 102(b) as being anticipated by Prakash et al. (US 5,119,113).

Referring to Figs. 3-4 and column 5, lines 12-46, Prakash et al. disclose a mask with stripe-shaped apertures (60 in Fig. 4) for selectively transmitting a laser beam (58 in Fig. 4). As shown in Figs. 3-4, the lengths of the apertures (52, 54, 56, 60) have a saw-toothed shape that includes a center point of maximum width and end portions that are tapered from this maximum width.

These are all of the limitations set forth in claim 33 of the applicant's invention.

Allowable Subject Matter

4. Claims 28-32 are allowed.
5. The following is a statement of reasons for the indication of allowable subject matter: Claims 28-32 are allowed because the prior art of record does not teach or suggest, in combination with the other claim limitations, a sequential lateral solidification mask that includes a plurality of stripe-shaped light transmitting portions for passing a laser beam, wherein at least one end of each light transmitting portion has a shape of either a triangle or a semicircle and a width of the at least one end is smaller than a width of a central point of the light transmitting portion.

Response to Arguments

6. Applicant's arguments with respect to claim 33 have been considered but are moot in view of the new ground of rejection.
